

The Second Palatial Period – an addendum

Knossos – intensive building activity in MM III-LM IA, a weak one in LM IB

Malia – problematic chronology, but the situation there seems similar to Knossos

Phaistos – today visible palatial building built only in LM IB; the builders leveled the plateau, thus we do not know what was going there in MM III-LM IA; there are a few traces of some buildings and fragments of frescoes

Zakro – the palace existed throughout the whole phase MM III-LM IB

Destructions of the end of LM IA are well visible on the whole island, Knossos lost probably on importance
